Highly automated progress note charting, automatic data retrieval, standard phrase selection, voice input, recommended billing coding based on complexity

cyberREN OFFICE provides standard **Excel® spreadsheets** which report data in a tabular as well as graphical format

Qualitative / Quantitative

How does that apply specifically to a renal facility? cyberREN® performs *faster*, it does *more* and it is *less expensive* than traditional systems. It is also much easier to learn to use and to operate. Even more important than the quantitative advantages are the qualitative advantages—which afford the renal facility a true competitive edge by allowing better capture of data, and by automating what is done with that data, providing a new level of facility-wide effectiveness.

cyberREN® represents the latest in software development technology applied to the unique requirements of nephrology

cyberREN OFFICE is flexible and modifiable, and can be tailored to the individual user or treatment facility

Practice Management

Patient demographics & summaries
Practice schedule
Charge capture or cyberFUNDS, billing system
Electronic lab results import
Scanned documents
Automated document generation

Medical Functions

Patient histories, problem list
Encounter charting / progress notes
Laboratory results / trends
Ordering – medications, procedures
Charting - HD & PD access, peritonitis

Transplantation

Transplant workup / follow-up
Cross-match testing / HLA typing
Biopsies / rejection episodes
